Soundlag 4525C

THE PREMIER FLEXIBLE ACOUSTIC BARRIER

What is Soundlag

Soundlag 4525C is a pipe wrap comprising of 5 kg/m² flexible acoustic barrier bonded to 25 mm thick flexible convoluted foam. The function of the foam is to provide acoustic decoupling between the pipe's noise energy and

the 5 kg/m² flexible acoustic barrier external wrap, resulting in superior performance. The external face of the barrier is bonded to an aluminium foil providing a fire resistant covering.

Soundlag 4525C

Soundlag is so easy to use

Soundlag 4525C is easily cut to size with a knife or scissors, minimising wastage. Simply wrap Soundlag 4525C around the pipe and then use high quality aluminium tape to join the product together. Drillfast recommends an overlap at all joints to eliminate potential flanking noise.

Top: Examples of configurations for various bends and typical pipe wrapping requirements

Australian Building Code Requirements

Soundlag meets all BCA (Building Code of Australia) Compliance requirements for Section F5.6 - Non habitable & F5.6 Habitable room.
