

## MORSE HOLESAWS

# BI METAL HOLESAW

Unique tooth face design & aggressive tooth rake angle. Our Bi-Metal Holesaws offer smooth, efficient chip clearing, in a wide range of cutting applications including maximum penetration into work piece for quick efficient cutting.

## **LARGER TOOTH PROFILE**

Increased impact resistance in interrupted cuts. Holesaws also have longer tooth life while maintaining cutting penetration.

## **DEEPER GULLETS**

With smooth chop-clearing in "deep" cutting applications. Efficient chip clearing provides longer tooth life.

Using a fast adapter, screw clockwise in to top thread of the holesaw until finger tight.

Taking the quick release Arbor, align drillbit with hole and push through aligning the black pins on the arbor with holes in the holesaw.

Once the gold pins on the adapter meet the arbor, turn the gold quick release knob on the top of the arbor clockwise to lock the arbor to the adapter.

## **FAST ADAPT QR**

Quick release arbor system With just a twist and a click you're ready to go. No more wasting time. With the quick release system, interchanging holesaws is faster than ever.

Morse Fast Adapt QR provides the solution for the professionals who consistently use common sizes of holesaws everyday.

# THE REAL MCCOY

A convenient multi-purpose holesaw for general contractor Holesaws cutting applications. Attached 7/16" pass through shank arbor is a time saver. Requires 4-5/16" HSS Pilot Drill. Cutting depth is 1-11/2" (38mm).

## FEATURES

- Positive rake teeth for more aggressive cutting action
- Better tooth match for smoother cutting
- Variable pitch teeth reduces friction and heat
- No separate arbor required

## APPLICATIONS

Wood, plastic, machinable metals, stainless steel alloys, nail-embedded wood.

## CARBIDE TIPPED HOLESAWS

Long lasting choice for very hard abrasive materials. These materials too hard or too abrasive for standard bi-metal holesaws, or so thin they would strip bi-metal or chip carbide teeth. Cutting depth of 1-1/2". Arbor required.

### FEATURES

- Super resistance to heat, wear and abrasion with shock resistant back
- Tungsten carbide grains are bonded to alloy backs with a gulletted snag resistant edge
- CT pilot drill recommended for masonry materials

### APPLICATIONS

Acoustic tile, brick, cast iron, cement board, ceramics, cinderblock, composites, computer flooring, fiberglass, hardened steel, particle board, asbestos board, and Formica.

## DIAMOND CORE DRILLS

- Long lasting - Industrial Diamond Grit brazed to hardened and tempered alloy body
- Fast cutting - Fast and easy cutting of abrasive materials
- Smooth clean cuts - Finish cut edges are smooth and clean
- Self guiding - Hollow core center keeps hole saw centered in cut
- Easy plug removal - side slots allow for fast removal of material

## THE REAL MCCOY

Tungsten carbide tooth tips offer the highest wear resistance possible for fast holes and longer life when cutting abrasive materials. Cutting depth is 1-1/2". Arbor required.

### FEATURES

- Special tooth design for very fast holesaw cutting
- Ground and set teeth help to cut materials that bi-metal holesaws will not cut

## DOUBLE CUT AUGER BITS

Premium double fluted auger bits provide excellent deep boring in wood and nail-embedded wood applications. Precision ground, heat-treated and tempered cutting edges cut through nails.

### FEATURES

- Self-feed screw point for effortless boring
- Double flute design for fast chip removal and less clearing of bit
- Resharpenable edge allows for quick touch ups to maintain edge and life of bit
- 7/16" quick change shank allows for use with quick change chuck

### APPLICATIONS

Wood and nail-embedded wood.
