

RBM AIRTERM DIRT

COMBINED SELF-CLEANING DIRT SEPARATORS / FLANGED DEAERATORS

Airterm Dirt combines the functions of common dirt separators and deaerators in a single solution. They are used to remove air and impurities from hydraulic systems.

By removing dirt and air from the system, unnecessary breakdowns and malfunctions can be reduced, helping to:

- Increase heating and cooling efficiency
- Reduce the formation of corrosion in all points of the system
- Reduce extraordinary maintenance work
- Reduce the effects causing systems noise
- Lower the cost of system management

They can be used in heating and cooling systems. In order to function properly, the dirt separator/deaerator must be installed in a vertical position with impurity drain valve facing downwards.
