

## SUPER WAFFLE PAD

## PRODUCT FEATURES

- **Convenient, Customizable, Cost-effective**  
Each sheet comprises 81 modules of size 50mmx50mm, separated by a thin webbing which can be slit using any normal scissor. Therefore, the pad can easily be cut to any size and shape to suit equipment base and load (as shown below).
- **High Performance**  
The pad is 20mm ( $\frac{3}{4}$ " ) thick, moulded in compounded natural rubber. This gives it resilience and low permanent set.
- **Superior 'Square-Cell' pattern**  
The 'square-cell' design of WEICCO WMP modular pads provides higher deflection than the round-hole design offered by some brands. The square pattern also resists rib collapse under load.
- **Sealed against Contaminants**  
The square cells form suction pockets which effectively seal the pad from external contaminants.

## SPECIFICATIONS

Pad Model	WEICCOWMP
Standard Size	450mm x 450mm x 20mm
Material	Compounded Natural Rubber. Other elastomers such as EPDM, Neoprene, SBR etc. available on application.
Loading	Recommended upto 75kg per module
Deflection	Appx 3mm at rated load
